

ION

The whole security operation, one intelligent portal

ION unifies the security tool-stack and adds an AI analyst that runs **entirely inside your network** — turning alert overload into fast, consistent, defensible decisions.

Alert overload

Analysts can't keep up; real threats slip through the noise.

Tool sprawl

A dozen disconnected consoles slow every investigation.

Locked out of AI

Air-gapped estates can't use cloud AI or live feeds.

Outcomes the business feels

Respond faster

AI auto-investigates incoming alerts and one workflow replaces tool-hopping — cutting time-to-decision.

Data never leaves

The AI analyst runs fully air-gapped. No alert content, no case data, ever leaves your network.

Consistent quality

Every alert gets the same rigorous analysis — regardless of who is on shift, or whether anyone is.

One platform, not ten

11+ security tools — detection, threat intel, forensics, identity — unified behind a single portal.

Gets smarter over time

ION learns from your analysts' decisions and your own knowledge base, improving accuracy as it runs.

Assurance built in

Secure-by-design throughout, with a tamper-evident audit trail and zero open security findings.

Measurable, and ready to run on-premise

no critical, high, medium or low issues outstanding

The bottom line

ION gives security leadership faster, more consistent threat decisions and a smaller tool estate — with AI that respects the air gap and a posture you can put in front of an auditor.
